

Stabilised Turf Replacement System

TRANSFORMER

Stabilised Sportsturf

Developed by experienced stadium turf managers Richard Winter and Gavin Darby, **TRANSFORMER** is a totally unique turf replacement system combining excellent agronomic properties with an instantly stabilised turf. From the initial concept in 2005, through rigorous R&D investigating various reinforcement materials and involving numerous test plots being planted, harvested, installed, assessed and removed for evaluation, the product **TRANSFORMER** was finally launched in 2007.

Features

- Sound agronomic qualities
- Integration with existing profile
- Exceptional replacement qualities in terms of installation speed and levels
- Flexible, 3 dimensional, continuous backing
- 3D Backing Matrix is fully permeable with 95% open space
- Provides reinforcement to a height of 25mm
- Contract grown to suit customer specifications of growing medium and turf grass selection

Sporting Surfaces

Commercial Scale Operations

TRANSFORMER is available at a commercial scale throughout Australia.
